

Goglio

Goglio's packaging lines can solve different needs: vacuum, gas compensation, atmosphere and controlled atmosphere. G Nova HF 3/6 is a hot filling machine conceived for vegetable preserves, as tomato paste. Provided with the most advanced control systems, among which remote service and diagnostics, it is fed with z-belt pre-made flat or stand-up pouches, particular shapes and formats from 70 to 500 ml. The pouches can be produced with different kind of high barrier laminates with or without aluminium foil, suitable for microwave ovens.

For the packaging of coffee Goglio proposes the new line G300, an easy solution for all coffee producers (for 250 gr ground coffee and 1 kg coffee beans). Characterized by reduced installation times, it is fed with laminates in reel to manufacture a squared vacuum or with gas compensation bag, straight trim and valve, the chance to fold the upper flap and apply reclosure label.

Goglio enriches its range of packaging machines with G21. It is a compact and cheap Form & Fill, suitable for products in powder and grains. Thanks to its reduced size, it is the ideal solution for small producers who want the quality of the complete system proposed by Goglio: multilayer transparent, metalized laminates and packaging lines.

G21 can produce bags in atmosphere with gas compensation, with squared bottom both with central back seal and 4 longitudinal corner seals. It can produce formats from 100 to 3.300 cc, can reach a speed of 25 pcs/min and can be perfectly matched with the valve applicator.
