PROGRESSIVE QR CODE

GOAL

The aseptic packaging turns to be interactive thanks to the personalization of large size bags (220 lt and more).

WHAT

The **Progressive QR Code** is a special unique digitally printed code put on Goglio aseptic bags.

HOW IT WORKS

Thanks to the introduction of the progressive QR Code packaging can be considered unique and unambiguous, as all traceability data can be associated to it guaranteeing product tracking. Control, localization, analysis and potential separation phases are therefore extremely simplified, while metadata associated to each selling unit can be processed in real time.

WHAT'S MORE

Goglio solution stands out for innovation and is compliant with Industry 4.0 standards, assuring efficiency and transparency to entire product life. The recorded data are unique, certain, brief and can trace back with precision to the main phases of production, processing and distribution while at the same time assuring authenticity
